

Can I import discretized exist watershed by hand ?

Posted by anusara - 2008/10/12 15:57

My english not good but I want to ask.

The delineate watershed that made by agwa process is not good resolution. Then I delineate watershed by my self and convert to polygon all ready.

How to recalculate parameters or input by using program?

Please help me.

You must use the AGWA2 delineator, you cannot delineate the watershed manually. If you are unhappy with the results of the delineation, you should try using a higher resolution DEM. If the delineation is still unsatisfactory, then it is perhaps some man-made structures like roads, bridges, culverts, etc. are interfering with the delineation. If this is the case and you know their location, you could try burning the features into the DEM to force the delineation to change.
